

The Intelligent Parking Solution

Our system will enable car drivers in Singapore to obtain real time car park information. Through our auto-response SMS and our web server, drivers will be able to find out all the information they need on the major car parks in Singapore. We hope to market our innovative system, which will make it easier for drivers to find a suitable car park.

Key features

- Cost effective way to keep track of number of vacancies in car park.
- Data center contains real time information of the vacancies and transfers this data to the main server via text file format.
- Main server equipped with SMS gateway and GSM modem to allow it to auto-respond to users.

Applications

- Drivers are able to find out the number of vacancies at the car parks in a particular area.
- Drivers will know the parking rates of each car park.
- Data logging on the occupancy rates of car parks for the use of car park operators are provided in Excel format.
- All information are available online or through on-demand SMS.
